## *Delivering the Roseisle Distillery using 3D BIM*

Successful delivery of projects underpins everything that we do as engineering consultants. Industrial projects (such as the Roseisle Distillery in Speyside, Scotland) require additional engineering leadership and a unique understanding of the environment and challenges faced on these projects. Stuart and Nathaniel will detail the background to this special project and expand upon the specific challenges faced and overcome, particularly focusing on the large team required to deliver; the project management skills required; and the use of BIM as a technical and management tool.

***Presented by***

**Mr. Stuart Mason**

AECOM

Stuart Mason is the European and Global Building Engineering Industrial Sector Head and has an established a track record of excellence on numerous industrial building projects. He has a comprehensive understanding of the unique requirements of industrial buildings and the need to recognize the industrial process as the foundation of the engineering design. Stuart's leadership of the industrial centre of excellence in AECOM brings together a focus on delivery, quality and performance. His well established team has a wide range of strong and relevant industrial experiences which ensure delivery of robust, world class solutions which represent value-for-money. Stuart was Project Director for the Roseisle Distillery project working closely with senior Diageo management to ensure the effective delivery of this significant project.

**Mr. Nathaniel Buckingham**

AECOM

Nathaniel Buckingham is a Principal Engineer with a track record of excellence, managing multi-disciplinary design teams on a number of successful industrial projects. He brings a strong focus on delivery, quality and performance ensuring that the engineering team provides a first rate service and delivers complete client satisfaction. His relevant industrial experience ensures delivery of robust solutions that represent value-for-money. Nathaniel was Project Manager for the Roseisle Distillery working to coordinate all engineering and process disciplines and spending a 6 months period on act as design team representative for liaison with the contractor.
